

GHOST

la sella che non c'è

MATERIALI E PRODUZIONE INTERAMENTE IN ITALY

How to fit your Ghost instructions

GHOST SADDLES ITALY

the correct position

because of the construction of the Ghost base, the front can be above the shoulder blades - the panels will not obstruct the movement

too far forward

this position is too far forward and the saddle is not balanced

too far to the rear

this position is too far to the rear - the rider will sit behind the 18th rib and the saddle will tip forward

positioning the girth straps

this is the correct position. It is easy to do for every horse

The sliding V rigging

this construction allows you to move the girth straps above the natural place for the girth

Incorrect position

the girth straps are too far to the rear and not above the natural place for the girth

Correct position

The girth straps are above the natural place for the girth

correct position of the V

The correct position depends on the conformation of your horse. You can easily move the V to where it must be

The girth needs to be long enough

A short girth can make the saddle less stable

Incorrect position of the girth

The saddle will be less stable and the buckles will hurt the elbows of your horse

Correct 
Now you can start to ride
