

Demo Program & Purchasing

Moss Rock Endurance has a limited demo line of several of the saddles. Because it does take some time to get a new saddle manufactured and shipped from England, the demo saddles are for sale since most are brand new.

If a saddle is ordered, we require 50% deposit at that time, 50% upon the saddle shipping from England. If the saddle is returned (within two weeks of receipt from Moss Rock), your money is refunded less a 5% restocking fee. (Refunds do not apply to special orders, e.g., extra wide trees.)

For demo, a 50% deposit plus \$35 for shipping is required. The customer has 2 weeks to try the saddle and either decide to purchase, order another, or return. If the saddle is returned without purchase, the initial 50% deposit is refunded, a \$40 restocking fee charged, and any fees for damage.

If you are within reasonable driving distance (two hours) of Colorado Springs CO, I can do private fittings for \$50. These customers also have the option of hand delivery and fitting instead of shipping when your saddle arrives.

MRE can take payment in Visa, MasterCard, PayPal, check or Money Order.

Thank you for your interest in Free'n'Easy Saddles!

Why buy a Free'n'Easy saddle?

For the Horse!

- ⇒ Large panels distribute riders weight over a greater area.
- ⇒ Adjustable and flexible panels distribute rider's weight evenly, even as the horse moves.
- ⇒ Allows the horse's shoulder to move freely, improving stride length and lateral movement.
- ⇒ Enables the saddle to fit through a young horse's development and through stages of fitness throughout the year.

For the Rider!

- ⇒ A naturally balanced seat—the rider sits without effort in the deepest part of the seat.
- ⇒ Less fatigue, even over the longest rides—no knee strain from badly placed stirrups.
- ⇒ Greater freedom to develop your riding technique—the correct shoulder-hip-heel alignment can be maintained with ease!

It is quite common for a horse ridden with a *Free'n'Easy* saddle to greatly improve muscle development behind the withers. The shoulders move freely and the horse is much more likely to carry himself properly, using the back muscles and reducing the likelihood of a sore back—after even the longest endurance rides.

The rider may have a similar breakthrough. Being properly balanced has a great impact on confidence. Not having to fight for stirrup position makes posting much easier. Starting balanced gives you a better chance of staying balanced through varying terrain and horse antics.

Free'n'Easy Saddle Materials

- ⇒ Top quality dyed-through leather is always used.
- ⇒ D-rings are solid brass, fixing screws are High Tensile Steel and the stirrup bars and all other fixings are in Stainless Steel.
- ⇒ For superior shock absorption, there are 3 layers of an open cell, engineered foam called PORON® Performance Urethane within the panel system.
- ⇒ Polyurethane is an ideal material from which to make a tree since it has high durability and will not break or twist—guaranteed!
- ⇒ The billets are made with layers of leather over synthetic to ensure that the holes will not stretch.

PORON® is a licensed trademark of Rogers Corporation.

Free'n'Easy Saddles

The *Free'n'Easy* saddle is suitable for all equestrian sports where freedom, comfort and balance are essential for a happy partnership between horse and rider. The basic characteristics of the panels, which contact the horse's back, and the ability to optimize rider balance in the seat, remain the same in all *Free'n'Easy* saddles. However, the seat and flap shape (dressage, jumping, general purpose etc.) can be made to suit the requirements of the particular sport and the preferences of the rider.

Endurance Special

Endurance riding requires conservation of energy on the part of both horse and rider. The horse must be able to travel at the desired speed with no energy being lost in discomfort. A rider placed in the shoulder-hip-heel position will have a better chance of being in balance at all times. Sure footedness over rough ground is of vital importance—horses compensating for or constrained by the saddle will be less able to pick and choose their going, especially at speed. The Endurance Special provides a comfortable ride for horse and rider. The Special comes with substantial knee rolls that provide security for all riders — Even western riders are surprised how confident they feel!

The Endurance Special starts at \$2,430, which includes a 100% English wool saddle pad/numnah and Tool & Care Kit. Shown on the cover with the Classic seat style, here with the new Ultimate Comfort seat.

All Purpose

For riders of a bigger build or longer leg, the AP can be a good choice for endurance riding (along with flat work and small jumps!) as it is not always possible to ride with a straight leg. The forward cut flap allows for a bent leg and room for the knee, while also maintaining balance. Adjustable/removable knee supports. The GP starts at \$2525, which includes a 100% English wool saddle pad/numnah and Tool & Care Kit..

Dressage Special, Standard and Close Contact

Balance and poise is so important to Classical Riding. One of the many new concepts behind *Free'n'Easy* saddles is the optimization of the rider position. The stirrup position is adjusted to place the rider in the S-H-H position, over the horse's point of balance, without the need to strain for it. For the horse, the shoulder and back muscles are released and the pace will become more elevated and lateral work more confident. Pricing begins at \$2,525 (CC Dressage) and \$2,699 (Special and Standard), which includes a white dressage square and Tool & Care Kit.

Special

Endurance Standard

The Standard is similar to the Special, but has the appearance of a conventional working hunter saddle, the knee roll being on the sweat flap rather than the leg flap. The knee roll is adjustable and can be moved or removed. This saddle may be more comfortable for those with a longer leg to ensure the knee roll does not interfere. Pricing begins at \$2,300, which includes a 100% English wool saddle pad/numnah and Tool & Care Kit.

LOWER PRICED (and less weight) OPTIONS!

Trekker I

Although this saddle represents a lower priced option, it is used by many riders competing at higher mileages. The Trekker I has no sweat flap and an external knee roll. Pricing begins at \$1575, which includes a 100% English wool saddle pad/numnah and Tool & Care Kit.

Endurance Lite (E-Lite)

Free 'n' Easy's new Ultimate Comfort seat -- with FENDERS! Integral, buckle-free stirrup leathers with fenders for close contact and blissful comfort! 11 pounds. Pricing begins at \$1599, which includes a 100% English wool saddle pad/numnah (shown here in Blue/Natural) and Tool & Care Kit.
